

# Let's play a game

- Game – Objective is to get as many tennis balls through the team as possible in a given time frame.

## Rules of the game

- 12 people per team – 3 teams
- Each ball must be touched at least once by every team member.
- Each ball must have air-time
- Balls cannot be passed to your direct neighbor to your immediate left or right
- Each ball must end with the same person with whom it began
- There are a total of **three iterations** (2 min each)
- Before each iteration, you can discuss for 3 min
- Provide an estimate before every iteration

# Debriefing

- What were the main challenges your team encountered during the iterations, and how did you address them?
- How did feedback between iterations help improve the process? Can you think of a real-world scenario where this might be useful?
- What did you learn about the importance of communication and collaboration in team settings?
- How did limited time per iteration affect your team's planning and execution?
- If you could restart the game with the knowledge you have now, what would you do differently?

# Insights

- Deming Cycle

PDCA → Plan – Do – Check – Act

Later changed to Plan – Do – Study – Act

- Equates to agile process flow
  - It's an iterative, incremental approach to developing software

# Submission Activity - Individual

**In the context of the game, what specific elements of the agile framework became evident to you, and how do these elements differ from traditional process models?**
